

Seminar presentation - Pontifícia Universidade Católica do Paraná

20 August 2026

Shape and insulation domain optimization regarding wall energy efficiency

Who I am ?

I am William DUMONTAUD and I have been a **CNRS** PhD student since 1st November 2024 at LaSIE.

- Supervisor :
Julien BERGER, CNRS researcher for LaSIE, UMR 7356.
- Co-Supervisor :
Benjamin KADOCH, teacher-researcher for IUSTI, UMR 7343.

Funding: [ANR JCJC 2023 TOPS](#) (Optimisation topologique et de forme des parois opaques de bâtiments) project.

Table of Contents

1. Introduction
2. Physical problem
 - ▶ Governing equation
 - ▶ Boundary conditions
3. Insulation domain optimization
4. Shape optimization
5. Why do I come here ?

Introduction Physical problem Insulation domain optimization Shape optimization Why do I come here ?

My research topic

Shape and insulation domain optimization regarding wall energy efficiency.

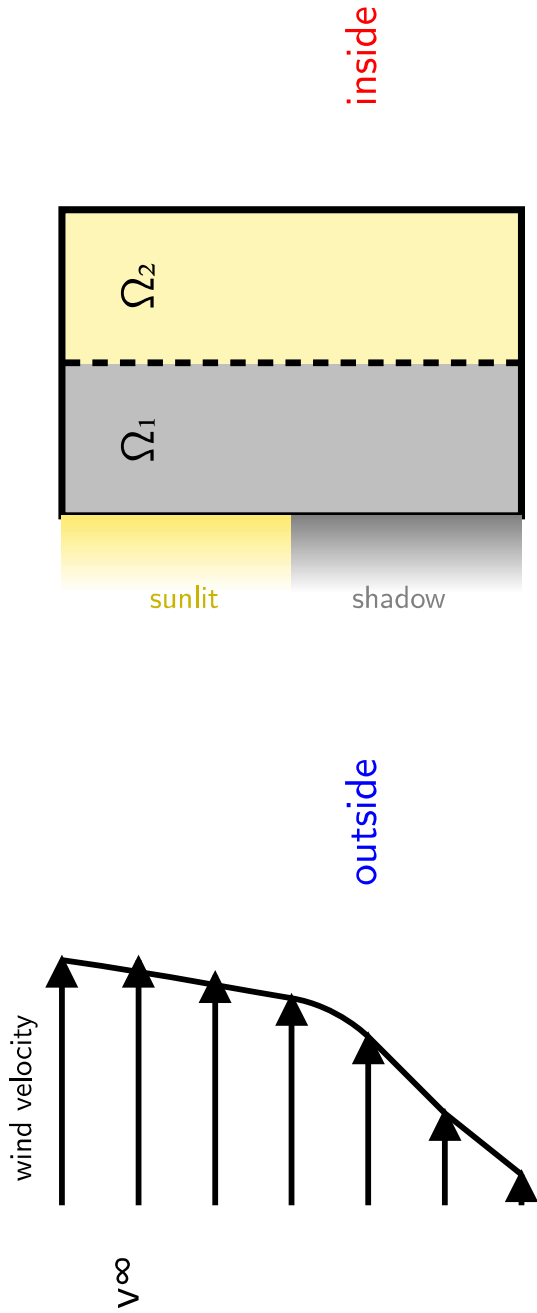

Figure 1: Illustration of non-uniform boundary conditions [Rocha 2017; McAdams 1954].

Global strategy : stage 1

to be written

Physical problem Insulation domain optimization Shape optimization Why do I come here ?

Global strategy : stage 2

to be written

Governing equation

to be written

Why do I come here ?

Shape optimization

Insulation domain optimization

Boundary conditions
